0.0001 pc < semi-major axis < 0.01 pc

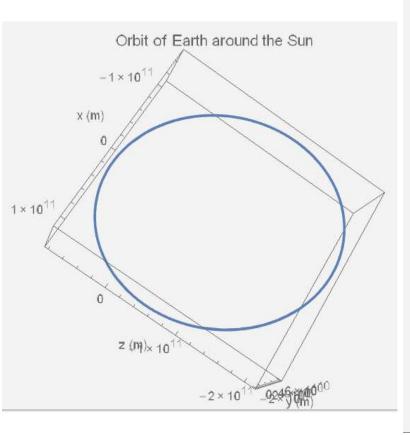

ساخت خوشه از طریق برنامه تولید خوشه برای دوتایی های ستاره ای

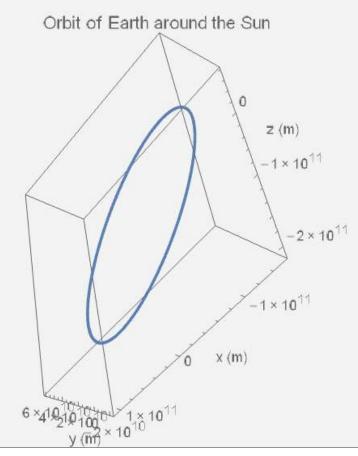

20.6265 AU < semi-major axis < 2062.65 AU

قسمت دوم برنامه:

و دارای یک موقعیت اولیه سه بعدی تصادفی

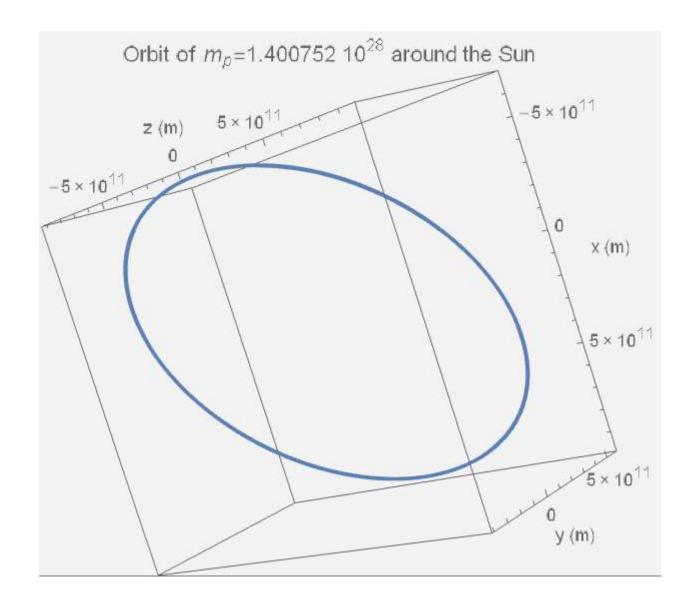

```
m_p= 5.973600E+24 x0= -1.446837E+11 y0= 3.306521E+10 z0= 
-1.878408E+10 vx0= 9499.229000 vy0= -7832.447000 vz0= 
27123.430000 vc= 29786.960000 r0= 1.495979E+11 v0= 29786.960000
```

```
G = 6.6723*10^(-11);
mSun = 1.989*10^30;
solEarth1 =
NDSolve[{r''[t] == -G*mSun*r[t]/Norm[r[t]]^3,
    r[0] == {-1.446837 10<sup>11</sup>, 3.30652 10<sup>10</sup>, -1.87840 10<sup>10</sup>}, r'[0] == {9499.22, -7832.44, 27123.43}},
    r, {t, 0, 10*94608000}][[1]]
ParametricPlot3D[r[t] /. solEarth1, {t, 0, 94608000},
    AxesLabel -> ("x (m)", "y (m)", "z (m)"},
PlotLabel -> "Orbit of Earth around the Sun"]
```

```
G = 6.6723*10^(-11);
mSun = 1.989*10^30;
solEarth1 =
NDSolve[{r''[t] == -G*mSun*r[t]/Norm[r[t]]^3,
    r[0] == {1.267646 10^9, 7.271323 10^{10}, 9.368073 10^{11}}, r'[0] == {-10078.35, -6073.116, -1674.88}},

AxesLabel -> {"x (m)", "y (m)", "z (m)"},
PlotLabel -> "Orbit of mp=1.400752 10<sup>28</sup> around the Sun"]
```

1.400752E+28	1.267646E+09	7.271323E+10	9.368073E+11
-10078.350000	-6073.116000	-1674.883000	

قسمت سوم برنامه:

قسمت چهارم:

تحلیل خروجی ها و پیدا کردن سیاره های اطراف هر ستاره
